CYBR C180: NETWORK OPTIMIZATION AND MONITORING WITH SPLUNK

Item	Value

Course Description

This course introduces students to advanced Splunk search, event correlation, data enrichment, and performance tuning techniques. Students learn how to optimize network monitoring and troubleshooting by building efficient searches, leveraging lookups, using field extractions, and working with knowledge objects to support cyber investigations. This course prepares students for real-world security operations workflows and is aligned with industry best practices and certification objectives such as the Certified Splunk Power User. ADVISORY: CYBR C100 and CYBR C140. Transfer Credit: CSU.
