CYBR C220: ENTERPRISE SECURITY WITH SPLUNK

Item	Value

Course Description

This course introduces students to monitor, detect, investigate, and respond to security events on the Splunk Enterprise Security platform. Students learn to organize and interpret security-relevant data, correlate notable events, visualize threat intelligence, and support key Security Operations Center (SOC) workflows. Hands-on security exercises help students build practical skills for careers such as Information Security Analyst and Cybersecurity Specialist. ADVISORY: CYBR C100, CYBR C140, and CYBR C180. Transfer Credit: CSU.
