

ASTRONOMY

The astronomy department at OCC supports transfer-bound students and the broader community by offering a wide range of general-education courses and frequent public events held in conjunction with the OCC Planetarium. Our program promotes science literacy and trains future astronomers by strengthening students' understanding of the sky and the physical principles that govern the Universe. Many of our students go on and transfer to four-year programs in astronomy, astrophysics, or physics, and then continue on to graduate school.
