

AQUACULTURE, CERTIFICATE OF SPECIALIZATION

Aquaculture is a growing field that requires a skilled workforce with a background in a variety academic disciplines and applied trade skills. This certificate builds upon the Aquarium Science Certificate to specialize in the cultivation of aquatic organisms for use in food production, stock restoration for conservation purposes, propagation of ornamental species, organisms for research purposes, and other potential applications. Course content will focus on applying animal husbandry, water quality, and life support to high density production in recirculating aquaculture systems.

Program Outcomes

1. Describe how a properly designed recirculating aquaculture system can be used in large-scale production of aquatic organisms.
2. Identify commonly kept aquacultured organisms and explain what critical aspects of their anatomy, physiology and life history a well-trained aquaculture technician must know to be successful with their growth and potential reproduction.
3. Demonstrate the ability to design, set-up, operate, maintain and trouble-shoot recirculating aquaculture systems to provide adequate growing environment.
4. Demonstrate the ability to manage aquaculture recirculating system facilities including proper biosecurity protocols, nutrition to maximize fish growth, techniques for reproduction, and best business practices for the aquaculture industry.

Review Graduation Requirements (<https://catalog.cccd.edu/orange-coast/graduation-requirements/certificates/#specializationtext>).

Course	Title	Units
MRSC A120	Marine Aquarium Science	2
MRSC A135	Aquarium Water Quality	2
MRSC A140	Aquarium Life Support Operation and Maintenance	2
MRSC A145	Introduction to Aquaculture	3
MRSC A146	Introduction to Aquaponics	2
MRSC A245	Practical Experience in Aquaculture I	2
MRSC A246	Practical Experience in Aquaculture II	2
Total Units		15
